

# DIVE TEACHER'S GUIDE

## with Syllabus for Math 6/5, 3rd Edition

### PARENTS: Important Course Setup Instructions

- ☐ **PARENTS:** Watch this [Getting Started](#) video with your child.
- ☐ Print and read the [Student Instruction Sheet](#)
- ☐ Print the [Assignment Chart](#)
- ☐ Read [Memorizing Multiplication Facts](#).
- ☐ **Critical:** Use our frustration free Timed Method, described under Assignment Chart on page 2.
- ☐ **Determine the number of homework problems your student should do by reading page 3.**
- ☐ **Gather Materials:** [Materials List](#)
- ☐ **Required:**
  - **Notebook for notes and homework.** Some prefer large grid graph paper or unlined paper (spiral drawing book).
  - **Calculators:** Use of a standard calculator is allowed only on very large numbers (10,000 or greater), really small numbers (.0001 or less), and geometry problems like perimeter, area, and volume.
- ☐ **Read the Time-Saving Tips on page 6.**
- ☐ **Bookmark this Guide for easy reference.**
- ☐ **Review the remaining pages of this guide as needed.**

[CD-ROM Access Instructions & Tech Support](#)

## Assignment Chart & Schedule

The [DIVE Assignment Chart](#) is on page 10. For struggling or reluctant math students, using the Timed Method is recommended. Timed Method: Instead of requiring the student to complete one lesson per day, work on math five days per week, for no more than 30-45 minutes each day. At the end of that time, if the lesson is not completed, the student should stop. Then, pick up where they left off the next day. This encourages the student to go back and relearn forgotten concepts as needed, without feeling pressured to finish the entire lesson in one day. If your student is new to Saxon, the first 30 lessons, and occasionally throughout the course, may each take two or three days to complete. That's okay! If allowed to use the timed method, mastery, long-term retention, and fluency will develop and the lessons will be completed faster. **Learn More:** [How will my student finish on time?](#)

**Can I Skip the Review Lessons or Increase the Pace?** For Strong math students, see this article: [Skip Review Lessons](#)

## Lessons

Each lesson is made up of four parts: **DIVE Lecture, Saxon Facts Practice, Saxon Lesson Practice, and Saxon Mixed Practice**. The DIVE lecture number corresponds with the assigned Saxon lesson for that day. So, if you are assigned Lesson 4, you will watch DIVE Lecture 4 and complete Saxon Lesson 4 in the Saxon Student Textbook.

### STEP 1: SAVE TIME: WATCH THE DIVE LECTURE FOR EVERY LESSON!

Because the lesson in the Saxon textbook is only a summary of the complete lesson, John Saxon recommended an experienced teacher to teach his courses. In the DIVE lectures, Dr. Shormann includes the missing connections between the lessons, creating bite-sized lessons that are easier to understand. Teaching Saxon to homeschoolers for more than 20 years, he knows where students struggle and adds additional instruction for these concepts. **Dr. Shormann does not recommend reading the lesson in the Saxon textbook before watching the lecture.**

During the lecture students should take brief notes and solve example problems. After each example problem is presented, pause the lecture and solve it on your notes. Don't just copy the example problems. As John Saxon recommended, **Dr. Shormann uses different example problems than the Saxon lesson.** This provides additional practice on the new concept, if needed.

Occasionally, to provide concrete examples of abstract concepts, a Saxon **Activity Sheet** is used during the lecture. These sheets are in the Saxon Tests & Worksheets booklet.

## **STEP 2: Do the Facts Tests Daily** (in Saxon Tests & Worksheets booklet)

**Facts Tests:** After the DIVE lecture, open the Saxon Textbook to the assigned lesson. At the top is a small box titled Warm Up. The first line indicates which Facts Test to complete. The Facts Tests are drills used to memorize and develop fluency in the skills that make completing daily homework assignments faster. Do them every time they are assigned. The goal is to do them accurately in 5 minutes or less.

**Mental Math & Problem Solving:** Do once a week or so. If the student struggles with these, show them how to do the problem and move on. Do not spend more than 5 or 10 minutes on the Mental Math & Problem Solving Section.

## **STEP 3: Lesson Practice Section**

The Lesson Practice has 5-10 problems that provide practice on the new concept introduced in the DIVE lecture. Students should review the DIVE lecture, as needed, to solve these problems.

## **STEP 4: Mixed Practice Builds Long-term Retention**

The Mixed Practice section provides review of previously learned concepts. John Saxon's unique method of continual review (not spiral) means all previously learned concepts are practiced in the daily homework or the new concept is building on it and they are practiced together. Practicing a concept daily, over a long period of time, is proven to build long-term retention, increase recall speed and raise standardized test scores. Dr. Shormann has developed a very specific system to efficiently relearn forgotten concepts which is essential to building long-term retention. For details, see page 7.

Students will often forget a concept in this section. Don't be concerned about this. The important thing is to quickly re-learn the forgotten concept. A lesson reference number is in parentheses next to each problem that indicates which lesson that concept was taught in. When "stuck" on a problem, simply click on that DIVE lesson to quickly re-learn that concept. Better than an answer, this gives students the opportunity to apply what was just learned, building long-term retention.

At this point, if you "help" your student by showing them how to do the problem correctly, you are removing the opportunity to build retention. This will make math harder. However, if you follow Dr. Shormann's system to efficiently re-learn forgotten concepts, the student will eventually develop fluency which makes learning math faster and easier. For details see page 7.

### **How many Mixed Practice problems should my student do?**

Each Mixed Practice section has 30 homework problems. Because the DIVE lecture provides expert instruction, students don't need as much practice. In 20 years of teaching Saxon to homeschoolers, I have found that most students need to do about 20 problems per lesson to build mastery and fluency. The weekly test scores determine the amount of practice needed. This encourages students to study and do their best on the tests.

## Odds or Evens + 5 Method: 20 Mixed Practice Problems Per Lesson

This method can be used as long as the weekly test scores are 80+. If the student is following the Student Instructions on page 7, and **test scores drop below an 80 or 85**, increase the number of problems to 25 or 30 for a few weeks. Then, try dropping back to 20.

### How the Odds or Evens + 5 Method Works:

1. On odd numbered lessons, circle all odd numbered questions.
2. Circle 5 even numbered questions from the most recent lessons. The lesson reference number, in parentheses next to each question, indicates which lesson that concept was taught.
3. On even numbered lessons, circle all even numbered questions and 5 odd numbered questions.

## Strong Math Students: Odds or Evens Only Method

If you have a very strong math student, 15 problems in the Mixed Practice section may be enough practice. Do odd numbered problems on odd numbered lessons, and even numbered problems on even numbered lessons. If the student is following the Student Instructions on page 7, and test scores drop below an 85, try the Odds/Evens + 5 Method.

## New to DIVE or Saxon Math?

The first 30 lessons of each Saxon text are review and move fairly quickly. However, if you are new to Saxon/DIVE, some of these concepts may be new to your student. It is very important that you used the Timed Method to ensure the student has plenty of time to learn the concepts that are new to them, filling any gaps they may have from transitioning from another curriculum. Don't be surprised if it takes 2 or 3 days to complete one lesson. However, they will eventually develop fluency and math will become faster and easier.

## Investigations

Every 10 lessons there is an Investigation. These provide in-depth study on abstract or harder to grasp concepts. Students watch the corresponding DIVE Investigation lecture and work the problems (don't copy). **It is not necessary to do the Investigations questions in the Saxon text.** The DIVE lectures for the Investigations may be located in a separate folder from the Lesson Lectures.

## Weekly Tests

After every 5 lessons or so, a test is taken. They are in the back of the Saxon Tests & Worksheets booklet. The tests are cumulative, which means there are concepts from previous lessons. The number in parentheses next to each question indicates which lesson that concept was taught. This provides quick and easy re-learning of missed concepts. Dr. Shormann has a very specific system for studying, taking, and correcting tests that is designed to efficiently fill any gaps before starting the next lesson. For details, see the Tests section on page 8.

## Grades

### **Saxon Solutions Manual Step-by-Step Solutions to all homework and tests.**

This book has step-by-step solutions to every homework, facts drill, investigation, and test. A grade recording form is on page 9.

**Homework Grades:** The homework is practice (think piano or baseball practice). Don't be concerned about the number of missed homework problems. Students are expected to miss or "forget" some of the concepts until mastery is achieved. The continual "reminder" of solving the problem in the corrections step, over a long period of time, will eventually build mastery and long-term retention. If all the homework is completed and corrected as instructed on page 7, award a 100. Points can be deducted for sloppy work, not following instructions, etc.

**Test Grades:** Test scores are the only tool that should be used to measure understanding. Concepts are not tested until the student has had time to achieve mastery. Tests should be graded by a parent. Mark each wrong problem but do not correct or mark what they did wrong. Instead, the student should correct each missed problem by following the steps on page 8. Any missed problems the student corrects on paper without using any resources, award 1/2 credit. This gives the student an incentive for showing their work. If test scores drop below an 80 or 85 (with extra credit for corrected problems), increase the number of homework problems in each lesson. When test scores go up, you can try reducing the number of homework problems again.

To calculate a final grade, find the average for each column (sum of all grades divided by the number of grades) add all the grades in one column and divide by the number of grades). Then use the following formula to calculate the final grade.

$$\text{Final Grade} = (\text{Total Homework Average} \times .20) + (\text{Total Test Average} \times .80)$$

### **Grade Scale**

A – 90 -100  
 B –80 – 89  
 C – 70 – 79  
 D – 60 – 69  
 F – 59 or below  
 I – Incomplete

## Time-Saving Tips for Success

### **1. Watch the DIVE Lecture for every lesson.**

Take notes (headings and key points only) and work the example problems on your paper. After each example problem is taught, pause the lecture and solve it on your paper. Do not simply copy the example problems, try to solve them on your own. Rewind & fast-forward as needed. Students should not use the textbook during the lecture.

### **2. Work on math at least 4-5 days per week.**

### **3. Use the Timed Method**

See the Syllabus section on page 1 of this document.

### **4. Follow the Student Instructions on Page 7**

These instructions list a specific sequence of steps that should be followed when completing assignments that ensure mastery and fluency are developed. If you have not been following these steps, and the student is scoring less than 80% on exams, you should correct all missed test questions as instructed on the Student Instructions page, then back up 10 lessons. Use the timed method above.

### **5. If Multiplications Facts have not been memorized, use a Multiplication Chart**

If the student has not memorized their multiplication facts to 9, spend 5 - 10 minutes per day memorizing facts using flashcards or an app. While working on Saxon problems, allow the student to use a multiplication chart. This allows the student to continue learning concepts, while memorizing multiplication facts.

### **6. Do Facts Drill every time they are assigned.**

These drills are designed to develop fluency in essential skills. These skills make daily homework faster and easier.

### **7. Repeat Facts Practice Drills until mastered.**

If the student has not achieved mastery by the time they are taken with the weekly test, continue working on them daily until completed accurately in about 5 minutes or less. The ability to memorize develops at different times for different students. If your student is not developmentally ready to memorize, continue working on memorizing but don't be too concerned about this in Math 5/4 and 6/5.

### **8. Contact a Consultant!**

We have helped thousands of families succeed with Saxon Math for almost twenty years. We would love the opportunity to help you. Please [contact us here](#).

# Student Instruction Sheet for Lessons

**Parents: 1. Read the SCHEDULE on page 2. Print this page for daily use by the student.**

I. Lecture	Corrections
<b>1. Facts Practice Test</b> (Saxon Tests & Worksheets Booklet) Set a timer for 5 minutes and complete the drill. Parents grade it and record the score and time on the Recording Form A (Saxon Test and Worksheet Booklet)	<b>1.</b> Start a new page in your notebook titled, <b>“Corrections: Lesson xxx”</b> and list all the problems marked wrong in the first line, like this: 1, 3, 9, 18
<b>2. Watch the Lectures.</b> Don't use the book during the lecture. Instead: <ul style="list-style-type: none"> <li>• Take brief notes on headings and formulas.</li> <li>• After each example problem is taught, <b>pause the lecture and solve the example problem on your notes.</b></li> </ul>	<b>2.</b> Check each missed problem for careless mistakes. Often, once you know the answer is wrong, you can see your mistake. If so, solve the problem correctly on your “Corrections” page. Correct all you can like this.
<b>3. Lesson Practice Problems</b> (in Saxon Textbook) - Do all the problems in the Lesson Practice Section. Re-watch the DIVE lecture, as needed.	<b>3. For all remaining missed problems, follow these steps:</b>
<b>4. Do the Mixed Practice Problems.</b> Be sure to show your work!	- If you haven't already, follow steps A-D to re-watch the video lesson for the problem. Then, try to solve the problem on your corrections page.
<b>5. If you can't solve a problem, follow these steps:</b>	<b>4. For each missed problem you still can't solve, follow these steps:</b>
A. Click the DIVE lecture that matches the number in parenthesis next to the question.	- View the step-by-step solution for this problem in the Solutions Manual.
B. Fast forward the lecture until you see a similar example problem and watch it.	- <b>Try to solve the problem.</b> If you still can't, list the number on your corrections page with a note.
C. Pause the lecture and attempt to work the example problem in the lecture.	- Repeat these steps for each missed problem.
D. Try to solve the homework problem again. If you can't, skip to the next question. <b>Don't spend more than 5-10 minutes “stuck” on a problem.</b> You will learn how to solve it in Step 6.	<b>5.</b> If there are any problems you still can't correct, contact Dr. Shormann using the “Ask Dr. Shormann” contact form at: <a href="http://diveintomath.com/ask-a-math-question/">diveintomath.com/ask-a-math-question/</a>
<b>6. Parent: Grade the Homework</b> (use the Saxon Solutions Manual). Put an x next to each wrong problem. Do not write the correct solution. Give the work back to the student and have them follow the steps under “Corrections”.	

# Student Instructions for Investigations & Tests

**Parents: Read the SCHEDULE section on page 2. Print this page for daily use by the student**

Tests	Investigations
Study by working a few practice problems from each lesson listed next to the test number on the assignment chart.	1. <b>Watch the Investigation Lecture.</b>
Tests should be graded by a parent.  Parents do not correct, just mark wrong problems.	- Take brief notes on headings and formulas.
Check your work and correct all missed problems you can without using any resources.	- After each example problem is taught, <b>pause the lecture and solve each example problem on your notes.</b>
Any missed problems corrected this way should be awarded 1/2 credit. For all others:	- Do not simply copy the example problems. Try to solve them on your own.
<ul style="list-style-type: none"> <li>Re-learn and correct all other missed problems by following steps 4 A - D and</li> </ul>	2. Unless instructed otherwise in the video, do not do the questions in the textbook.
do several problems in the Lesson Practice section for that lesson.

# Frequently Asked Questions

## My student misses too many Mixed Practice problems.

**Misses 10 or more** Because these problems are from previous lessons, and mastery and long-term retention may not be developed, students often “forget” some concepts in this section. Don’t be concerned. Simply select the DIVE lecture that matches the number in parentheses next to each problem. Fast-forward to a similar example problem and watch that section again. Solve the example problem on paper, then attempt the homework problem again. Usually, they can then solve the problem on their own.

Better than an answer, this provides an opportunity to re-learn and apply, building mastery and long-term retention. **If you “help” your student before they attempt to relearn, you are removing the opportunity to build retention.** This will make math harder. However, if given the extra time required to re-learn, the student will eventually build fluency which makes learning math faster and easier.

Occasionally, even after re-watching the lecture, the student may not be able to solve the problem. That’s OK. They should mark it wrong and go to the next question. It will be corrected during the Corrections step on the Student Instructions page on page 7.

## New to DIVE or Saxon Math?

The first 30 lessons of each Saxon text are review and move fairly quickly. However, if you are new to Saxon/DIVE, these lessons may not be review. It is very important that you use the Timed Method to ensure the student has plenty of time to learn the concepts that are new to them, filling any gaps they may have from transitioning from another curriculum. Don’t be surprised if it takes 2 or 3 days to complete one lesson. However, they will eventually develop fluency and math will become faster and easier.
