

DIVE TEACHER'S GUIDE

Math 8/7 with Pre-Algebra, Third Edition

Important Setup Instructions

1. **PARENTS:** Watch this [Getting Started](#) video with your child.
2. **Prerequisite:** Memorization of Multiplication Facts to 9 (Three seconds or less - no skip counting, using fingers or tricks). This is essential to learning the concepts in Saxon Math 8/7. If your student can complete the [Multiplication Mastery Test](#) in five minutes or so, they are ready for this course. If not, please [see this article](#).
3. Print and read the [Student Instruction Sheet](#)
4. Print the [Assignment Chart](#)
5. Read the **Timed Method**, described under Assignment Chart & Schedule on page 2.
6. Determine the number of homework problems your student should do by reading page 4.
7. **Gather Materials:** [Materials List](#)
8. **Note:** Use of a standard or scientific calculator is allowed only on very large numbers (10,000 or greater), really small numbers (.0001 or less), and geometry problems like perimeter, area, and volume.
9. **Solutions for Struggling Students:** Page 21
10. **Need help accessing or viewing the DIVE video lessons?**

11. Read the remaining pages of this guide.

Saxon Math 8/7 or Saxon Algebra ½?

Dr. Shormann recommends taking Saxon Math 8/7, 3rd edition. Then, skip Algebra ½ and take Shormann Algebra 1 with Integrated Geometry. [Learn more](#)

Course Description

Saxon Math 8/7 with Pre-Algebra, 3rd Edition provides an excellent foundation for Algebra 1 by developing fluency in the essential skills that make learning algebra easier. Students who successfully complete Math 8/7, 3rd Edition (including the Facts Practice drills), should skip Saxon Algebra 1/2 and take either [Shormann Interactive Algebra 1](#) (the recommended and updated format that prepares students for the PSAT, SAT, and ACT) or [Saxon Algebra 1](#). If needed, see the struggling student section on page 21.

Assignment Chart & Schedule: **Important! Please read!**

The [DIVE Assignment Chart](#) is on page 9. For struggling or reluctant math students, using the Timed Method is recommended. Timed Method: Instead of requiring the student to complete one lesson per day, work on math five days per week, for no more than 30-45 minutes each day. At the end of that time, if the lesson is not completed, the student should stop. Then, pick up where they left off the next day. This encourages the student to go back and relearn forgotten concepts as needed, without feeling pressured to finish the entire lesson in one day. If your student is new to Saxon, the first 30 lessons, and occasionally throughout the course, may each take two or three days to complete. That's okay! If allowed to use the timed method, mastery, long-term retention, and fluency will develop and the lessons will be completed faster. **Learn More:** [How will my student finish on time?](#)

Can I Skip the Review Lessons or Increase the Pace? For Strong math students, see this article: [Skip Review Lessons](#)

Lessons

Each lesson is made up of four parts: **DIVE Lecture, Saxon Facts Practice, Saxon Lesson Practice, and Saxon Mixed Practice**. The DIVE lecture number corresponds with the assigned Saxon lesson for that day. So, if you are assigned Lesson 4, you will watch DIVE Lecture 4 and complete Saxon Lesson 4 in the Saxon Student Textbook.

STEP 1: SAVE TIME: WATCH THE DIVE LECTURE FOR EVERY LESSON!

Because the lesson in the Saxon textbook is only a summary of the complete lesson, John Saxon recommended an experienced teacher to teach his courses. In the DIVE lectures, Dr. Shormann includes the missing connections between the lessons, creating bite-sized lessons that are easier to understand. Teaching Saxon to homeschoolers for more than 20 years, he knows where students struggle and adds additional instruction for these concepts. **Dr. Shormann does not recommend reading the lesson in the Saxon textbook before watching the lecture.**

During the lecture students should take brief notes and solve example problems. After each example problem is presented, pause the lecture and solve it on your notes. Don't just copy the example problems. As John Saxon recommended, **Dr. Shormann uses different example problems than the Saxon lesson.** This provides additional practice on the new concept, if needed.

Occasionally, to provide concrete examples of abstract concepts, a Saxon **Activity Sheet** is used during the lecture. These sheets are in the Saxon Tests & Worksheets booklet.

STEP 2. Do the Facts Practice Tests Daily (in Saxon Tests & Worksheets booklet)

Facts Tests: After the DIVE lecture, open the Saxon Textbook to the assigned lesson. At the top is a small box titled Warm Up. The first line indicates which Facts Test to complete. The Facts Tests are drills used to memorize and develop fluency in the skills that make completing daily homework assignments faster. **These drills are essential to preparing students for Algebra 1.** Do them every time they are assigned. The goal is to do them accurately in 5 minutes or less. **Mental Math & Problem Solving:** DO once a week or so. If the student struggles with these, show them how to do the problem and move on. Do not spend more than 5 or 10 minutes on the Mental Math & Problem Solving Section.

STEP 3: Lesson Practice Section

The Lesson Practice has 5-10 problems that provide practice on the new concept introduced in the DIVE lecture. Students should review the DIVE lecture, as needed, to solve these problems.

STEP 4: Mixed Practice Builds Long-term Retention

Finally, the Mixed Practice section is completed. It provides more than enough review of previously learned concepts. Saxon's unique method of continual review (not spiral) means the student is either practicing the concept in the mixed practice or building on it in the new lesson. Practicing a concept daily over a long period of time has been proven to build long-term retention which increases recall speed and raises exam scores.

Students will often forget a concept in this section. Don't be concerned about this. The important thing is to quickly relearn the forgotten concept. A lesson reference number is in parentheses next to each problem that indicates which lesson that concept was taught in. When "stuck" on a problem, simply click on that DIVE lesson to quickly relearn that concept. Better than an answer, this gives students the opportunity to apply what was just learned, building long-term retention.

At this point, if you "help" your student by showing them how to do the problem correctly, you are removing the opportunity to build retention. This will make math harder. However, if you follow Dr. Shormann's system to efficiently re-learn missed problems (Student Instruction Sheet page 6), the student will eventually develop fluency which makes learning math faster and easier. For details see page 6.

How many Mixed Practice problems should my student do?

Each Mixed Practice section has 30 homework problems. Because the DIVE lecture provides expert instruction, students don't need as much practice. In 20 years of teaching Saxon to homeschoolers, I have found that most students need to do about 20 problems per lesson to build mastery and fluency. The weekly test scores determine the amount of practice needed. This encourages students to study and do their best on the tests.

Odds or Evens + 5 Method: 20 Mixed Practice Problems Per Lesson

This method can be used as long as the weekly test scores are 80+. If the student is following the Student Instructions on page 6, and **test scores drop below an 80 or 85**, increase the number of problems to 25 or 30 for a few weeks. Then, try dropping back to 20.

How the Odds or Evens + 5 Method Works:

1. On odd numbered lessons, circle all odd numbered questions.
2. Circle 5 even numbered questions from the most recent lessons. The lesson reference number, in parentheses next to each question, indicates which lesson that concept was taught.
3. On even numbered lessons, circle all even numbered questions and 5 odd numbered questions.

Strong Math Students: Odds or Evens Only Method

If you have a very strong math student, 15 problems in the Mixed Practice section may be enough practice. Do odd numbered problems on odd numbered lessons, and even numbered problems on even numbered lessons. If the student is following the Student Instructions on page 6, and test scores drop below an 85, try the Odds/Evens + 5 Method.

Investigations

After every 10 lessons in the student textbook there is an Investigation that provides an in-depth study on abstract or harder to grasp concepts. Students watch the corresponding DIVE Investigation lecture and work the problems with Dr. Shormann. **It is not necessary to complete the investigations questions in the Saxon text.** The DIVE lectures for the Investigations are located in a separate folder on the DIVE CD and the DIVE Download titled Investigations.

Weekly Tests (1 hour time limit)

After every 5 lessons or so, a test is taken. They are in the back of the Saxon Tests & Worksheets booklet. The tests are cumulative, which means there are concepts from previous lessons. The number in parentheses next to each question indicates which lesson that concept was taught. This provides quick and easy relearning of missed concepts. Dr. Shormann has a very specific system for studying, taking, and correcting tests that is designed to efficiently fill any gaps before starting the next lesson. For details, see the Tests section on page 7.

Grades

Saxon Solutions Manual Step-by-Step Solutions to all homework and tests.

This book has step-by-step solutions to every homework, facts drill, investigation, and test. A grade recording form is on page 8.

Homework Grades: Since the homework is practice (think piano or baseball practice), use a completion grade. That means if all the homework (Lecture, Lesson Practice Problems, Mixed Practice Problems, and the Facts Worksheet) is completed and corrected as instructed on page 6, award a 100. Points can be deducted for sloppy work, not following instructions, etc. Don't be overly concerned about the number of missed homework problems. Students are expected to miss or "forget" some of the concepts until mastery is achieved. The continual "reminder" of solving the problem in the corrections step, over a long period of time, will build mastery and long-term retention.

Test Grades: Test scores are the only tool that should be used to measure understanding. Concepts are not tested until the student has had time to achieve mastery. Tests should be graded by a parent. Mark each wrong problem but do not correct or mark what they did wrong. Instead, the student should correct each missed problem by following the steps on page 7. Any missed problems the student corrects on paper without using any resources, award 1/2 credit. This gives the student an incentive for showing their work. If test scores drop below an 80 or 85 (with extra credit for corrected problems), increase the number of homework problems in each lesson. When test scores go up, you can try reducing the number of homework problems again.

To calculate a final grade, find the average for each column (add all the grades in one column and divide by the number of grades). Then use the following formula to calculate the final grade.

$$\text{Final Grade} = (\text{Total Homework Average} \times .20) + (\text{Total Test Average} \times .80)$$

Grading Scale

A – 90 -100

B –80 – 89

C – 70 – 79

D – 60 – 69

F – 59 or below

I – Incomplete

Student Instruction Sheet for Lessons

Parents: 1. Read the SCHEDULE on page 2. Print this page for daily use by the student.

I. Lecture	Corrections
<p>1. Facts Practice Test (Saxon Tests & Worksheets Booklet) Set a timer for 5 minutes and complete the drill. Parents grade it and record the score and time on the Recording Form A (Saxon Test and Worksheet Booklet)</p>	<p>1. Start a new page in your notebook titled, “Corrections: Lesson xxx” and list all the problems marked wrong in the first line, like this: 1, 3, 9, 18</p>
<p>2. Watch the Lectures. Don't use the book during the lecture. Instead:</p> <ul style="list-style-type: none"> • Take brief notes on headings and formulas. • After each example problem is taught, pause the lecture and solve the example problem on your notes. 	<p>2. Check each missed problem for careless mistakes. Often, once you know the answer is wrong, you can see your mistake. If so, solve the problem correctly on your “Corrections” page. Correct all you can like this.</p>
<p>3. Lesson Practice Problems (in Saxon Textbook) - Do all the problems in the Lesson Practice Section. Re-watch the DIVE lecture, as needed.</p>	<p>3. For all remaining missed problems, follow these steps:</p>
<p>4 . Do the Mixed Practice Problems. Be sure to show your work!</p>	<p>- If you haven't already, follow steps A-D to re-watch the video lesson for the problem. Then, try to solve the problem on your corrections page.</p>
<p>5. If you can't solve a problem, follow these steps:</p>	<p>4. For each missed problem you still can't solve, follow these steps:</p>
<p>A. Click the DIVE lecture that matches the number in parenthesis next to the question.</p>	<p>- View the step-by-step solution for this problem in the Solutions Manual.</p>
<p>B. Fast forward the lecture until you see a similar example problem and watch it.</p>	<p>- Try to solve the problem. If you still can't, list the number on your corrections page with a note.</p>
<p>C. Pause the lecture and attempt to work the example problem in the lecture.</p>	<p>- Repeat these steps for each missed problem.</p>
<p>D. Try to solve the homework problem again. If you can't, skip to the next question. Don't spend more than 5-10 minutes “stuck” on a problem. You will learn how to solve it in Step 6.</p>	<p>5. If there are any problems you still can't correct, contact Dr. Shormann using the “Ask Dr. Shormann” contact form at: diveintomath.com/ask-a-math-question/</p>
<p>6. Parent: Grade the Homework (use the Saxon Solutions Manual). Put an x next to each wrong problem. Do not write the correct solution. Give the work back to the student and have them follow the steps under “Corrections”.</p>	

Student Instructions for Investigations & Tests

Parents: Read the SCHEDULE section on page 2. Print this page for daily use by the student

Tests	Investigations
Study by working a few practice problems from each lesson listed next to the test number on the assignment chart.	1. Watch the Investigation Lecture.
Tests should be graded by a parent. Parents do not correct, just mark wrong problems.	- Take brief notes on headings and formulas.
Check your work and correct all missed problems you can without using any resources.	- After each example problem is taught, pause the lecture and solve each example problem on your notes.
Any missed problems corrected this way should be awarded 1/2 credit. For all others:	- Do not simply copy the example problems. Try to solve them on your own.
<ul style="list-style-type: none"> • Relearn and correct all other missed problems by following steps 5 A - D and 	2. Unless instructed otherwise in the video, do not do the questions in the textbook.
do several problems in the Lesson Practice section for that lesson.

Solutions for Struggling Students

- **My student is struggling in Saxon 8/7: [Remediation Plan](#)**
If your student is struggling or test scores, after adjusted for partial credit (see Tests), drop below 80%, follow the steps on the remediation plan linked above.
- **My student completed Saxon 87, 3rd Edition but scored less than 80%** (adjusted for partial credit as instructed in the Tests section above) **on the final 5 tests?** [Click Here](#)
- **My student failed or did not finish a Pre-Algebra course.**
See “Use Saxon 8/7 as a Remedial Course” or take [Shormann Pre-Algebra Self-Paced eCourse](#)
- **How to Use Saxon 8/7 As A Remedial Course: [Click Here](#)**
If the student failed a different pre-algebra course or did not finish it, the link above has a remediation plan to help students complete this course quickly while filling gaps and developing fluency.

If you have any questions or need further assistance, please [contact us](#).
